

SENTA

The most versatile
seat bathing lift

SENTA Combi bathing lift

THE INNOVATIVE AND VERSATILE SOLUTION FOR BATHING

ComfortMedic has worked with internationally known designers to develop new, innovative bathing lifts solutions providing optimal working conditions for nursing staff and enhancing the well-being and safety of your residents.

MULTIPLE APPLICATIONS – FITS TO ANY NURSING AND CARE TUB

Our SENTA bathing lift is just the right device to give your patient safe and comfortable hygiene care. The SENTA is a very mobile and easily moveable device which can be used in a variety of configurations and fits with any existing nursing and care tub.

CONVERTS EASILY TO A STRETCHER LIFT

The SENTA bathing lift can be converted at any time between a seat lift and a stretcher lift, using our stretcher lift module. All seats come as standard with fittings that allow a single nurse effortlessly to insert the side attachment wings. This provides the flexibility which is required if one wishes to avoid operating a second lift. The seat area of the lift is equipped with a large hygiene opening which can be closed with a cover if required.

SAFE, EASY OPERATION BY A SINGLE NURSE

Battery operated electrical drive provides smooth, stepless height adjustment and reassurance for the resident. The hand remote control allows the lift to be operated comfortably and safely by a single nurse.

SERVICE MODULE WITH HANDSET DISPLAY OF BATTERY CHARGE CONDITION

Our safety concept includes an integrated service module which signals faults on the lift or due maintenances. The optical display of the charging condition of the battery at the hand remote control includes a display of the charge condition of the battery as well as giving an optical overview of the standby function of the lift.

Highest quality and comfort

SENTA BATHING LIFT

FOR A SAFE TRANSFER IN AND OUT OF THE TUB

The SENTA combi bathing lift meets the highest standards of quality and reliability. It has multiple applications and can be operated safely and easily by a single nurse.

EXTENSIVE SAFETY CONCEPT

Each lift has, as standard features, an overload protection system as well as a collision protection sensor. Safety restraining belts and an optional siderail provide for the all-important safety of the resident. These combine with foldable armrests, which surrounds the resident, to provide an exemplary safety system. A manual emergency lowering system makes our concept complete.

HIGHEST QUALITY AND RELIABILITY

Quality and reliability are important features when choosing a lift. This we took into account when choosing our materials. Due to the aluminium column and through the use of stainless steel, which is additionally powder-coated, we offer an unmatched product life for the lift. By using standard components from wellknown manufacturers we guarantee both the highest quality and noticeably lower spare part costs compared with other lift manufacturers.

A MULTITUDE OF USES – EVEN FOR TRANSFERS FROM BED

Fitting in with your care routine, you can use our SENTA bathing lift to pick up the resident directly from the bed. The low frame fits under the nursing bed, allowing easy transfer from the bed. Alternatively the resident can also take the seat by himself, as the frame has been specially developed to allow this in a safer way.

Fitting in with your care routine, you can pick up the resident directly from the bed.

The low frame fits under the nursing bed and provides for easy transfer from the bed.

Features

SENTA BATHING LIFT

The SENTA combi bathing lift provides a variety of options, which support your staff in their daily nursing and care routine.

INTEGRATED, CALIBRATED PATIENT SCALE

An important part of today's nursing and care documentation is the assessment and monitoring of the weight of patients and residents. With an optional patient scale integrated into our bathing lift, ComfortMedic allows the resident to be weighed without an additional transfer. This increases efficiency, preserves the back of the nurse and offers an approved alternative to the usual scales. The SENTA digital scale is calibrated, with optical digital display, tare function and independent battery supply with automatic turn off.

SENTA STRETCHER LIFT MODULE WITH FOOT REST

Two removable wings extend the SENTA seat lift to convert it easily into a complete stretcher lift. The stretcher lift modules are equipped with an attachment device and a safety retaining system for trouble-free fixing to the seat. Each stretcher lift wing is positively adjustable to three different

positions and can be separately removed. An easy to fix footrest is also included for better support and higher comfort. An optional foldable armrest with special shape is also available for use with the stretcher module.

SIDERAILS

An optional siderail provides additional safety for your resident. The siderail is mounted from underneath the seat and the mount can be slid under the seat if the siderail is not in use. If needed, the siderail mount is pulled out from under the seat and the siderail can be inserted and secured with a safety lock.

BEDPAN

In option, a stainless steel bedpan with lid can be easily slid under the seat with a holding support.

The SENTA lift has multiple uses. Its hygiene opening, which can be covered, makes it useable for visits to the toilet.

The SENTA offers high comfort and easy access for hygiene care.

Key benefits

SENTA BATHING LIFT

The SENTA bathing lift perfectly combines safety and comfort and can be adapted for use in any care and nursing situation.

KEY BENEFITS FOR YOUR NURSING STAFF

- Easy operation
- Flexible system, useable as a seat lift and a stretcher lift
- Fits to any care and nursing tub
- Full safety concept

KEY BENEFITS FOR INVESTORS

- Materials made out of stainless steel and aluminium
- Component quality ensures long product life
