DEGREES OF FUNCTIONAL MOBILITY	
①	Ambulatory, but may use a cane for support; Independent, can clean and dress himself but can tire quickly.
②	Can support herself to some degree (with walking frame); Dependent on caregiver who is present in demanding situations (but not physically demanding for caregiver).
③	Usually sits in wheelchair, but is able to partially bear weight on its legs; Has some trunk stability, but is dependent on caregiver in most situations (physically demanding for caregiver).
④	Sits in wheelchair; Almost no capacity to support herself and cannot stand unsupported; Dependent on caregiver in most situations and physically demanding for caregiver.
⑤	Almost completely bed ridden; Passive resident, totally dependent and physically demanding for caregiver.
